

KAZPAP DEVELOPMENTS

PROPERTY DEVELOPMENT | BRISBANE, QUEENSLAND

PERSONAL TESTIMONIAL

I recently had the opportunity to see The Fire Knight Protector system demonstrated in person, and I was genuinely impressed.

The demonstration was held on a vacant block of land, where a room had been built specifically for a live fire test. It was a harsh environment, and seeing the system operate against a real fire made a big difference to me.

What stood out was the way the system detected an actual fire, rather than simply reacting to the presence of a flame. The speed at which it recognised the fire, activated and suppressed it was incredible. It is one thing to be told how a system works, but quite another to watch it happen in front of you.

After seeing the demonstration, I purchased eight Protector systems for the four houses we are currently building at 65 Stephens Road, South Brisbane QLD 4101. Each house will have two systems: one protecting the main living area and one protecting the main bedroom.

I have also recently purchased a development site for a project comprising 35 apartments, and we intend to incorporate The Fire Knight systems into that development as well.

Having seen the technology work firsthand, I am confident in what it can do. I plan to continue using The Fire Knight systems in our future developments.
